

# ENOCH GRAHAM

## SOFTWARE ENGINEER

Nairobi, Kenya • Tel: +254790482014 • [enochgraham003@outlook.com](mailto:enochgraham003@outlook.com)  
[linkedin.com/in/enoch-graham](https://linkedin.com/in/enoch-graham) • [github.com/graham005](https://github.com/graham005) • [enochgraham.online](https://enochgraham.online)

### PROFESSIONAL OBJECTIVE

Results-driven Full-Stack Software Engineer with real-world experience designing, implementing, and deploying client-focused features within structured engineering teams. Proficient in managing end-to-end component lifecycles using Node.js, TypeScript, React, and relational database design. Adept at driving Agile sprint cycles, conducting thorough peer code reviews, and automating robust testing and production workflows via CI/CD pipelines and multi-stage containerization architectures.

### TECHNICAL MATRIX

|                         |                                                                                                              |
|-------------------------|--------------------------------------------------------------------------------------------------------------|
| Backend Technologies:   | Node.js (Nest.js), TypeScript, .NET (C#), RESTful & GraphQL API Design, System Design, Server-Side Logic     |
| Frontend Technologies:  | React, JavaScript (ES6+), Tailwind CSS, Bootstrap, Responsive UI Component Design, State Management          |
| Databases & Storage:    | PostgreSQL, SQL Server, SQLite, Relational Schema Optimization, Indexing, ACID Transactions                  |
| DevOps & Cloud Systems: | Docker, Azure Cloud Services, Linux Systems, GitHub Actions (CI/CD Pipelines), Git & GitHub Automation       |
| Security & Workflows:   | Authentication Flows (JWT/OAuth), Input Validation, Advanced Git (Branching, Merge Conflicts, Pull Requests) |

### PROFESSIONAL EXPERIENCE

|                            |                        |
|----------------------------|------------------------|
| Software Developer Trainee | May 2025 – August 2025 |
|----------------------------|------------------------|

Teach2Give Company • Kutus, Kenya

- Collaborated closely within an Agile/Scrum team environment during real sprint cycles to deliver scalable client-facing web applications.
- Led feature development from functional design to implementation, writing performant frontend-integrated logic and secure architectural components.
- Participated in peer code reviews, providing technically grounded optimization feedback to improve team codebase readability and maintainability.
- Authored detailed technical documentation covering API endpoints and architectural trade-offs to proactively clarify project risks.

|                      |                          |
|----------------------|--------------------------|
| IT Technician Intern | April 2023 – August 2023 |
|----------------------|--------------------------|

Kiswa Technical Training Institute • Bungoma, Kenya

- Managed and troubleshooted Linux operating systems for development environments, establishing reliable testing setups and user software compatibility layers.
- Monitored application health parameters and infrastructure elements to isolate edge bugs, performing proactive preventative maintenance and root-cause analysis.

SELECTED ENGINEERING PROJECTS

Financial Management System (Client-Driven Backend)

Production Application

Technologies: C#, .NET, SQL Server, Docker, JWT Authentication, Server-Side Input Validation

- Architected a robust, secure RESTful API using server-side validation and JWT authentication protocols to safeguard sensitive multi-user transactions.
- Designed a deeply normalized SQL Server database schema, implementing strict transaction boundaries and query optimization to manage active institutional ledgers.
- Containerized full application execution environments using Docker to guarantee clean, predictable deployment workflows across production and testing clouds.
- Eliminated manual entry exceptions and accelerated institutional data reconciliation timelines from 5 days down to under 4 hours for over 200 active client personas.
- Wrote comprehensive error handling frameworks and secure operational logging modules to facilitate rapid post-mortem root-cause analysis.

MedDash (Full-Stack Telemedicine System Architecture)

Enterprise Web Architecture

Technologies: Node.js (Nest.js), TypeScript, React, PostgreSQL, Schema Indexing, API Design

- Engineered a performant RESTful API tier using NestJS and TypeScript to automate multi-user medical tracking, appointment booking, and asynchronous requests.
- Designed an optimized PostgreSQL relational schema managing intricate system relationships with proper index fields to significantly lower query response latency.
- Built a responsive, modular React front-end application with reusable client components, interfacing seamlessly with backend token-based security mechanisms.

Distributed Chat Application (Fault-Tolerant System Design)

Independent Engineering System

Technologies: C#, Network Sockets, Asynchronous Processing, Replication Protocols

- Designed a fault-tolerant, concurrent distributed messaging cluster allowing cross-platform mobile clients to maintain persistent server links safely.
- Developed a custom server-side synchronization and replication model that managed data asynchronously, achieving a verified 99.9% testing uptime framework.
- Demonstrated deep knowledge of network socket persistence, multi-threaded concurrency controls, and high-availability design constraints.

Learning Management System (LMS)

Web Application Evolution

Technologies: ASP.NET MVC, SQL Server, Razor Views, Bootstrap UI Framework

- Built an end-to-end multi-tier web application, creating relational schema definitions to track student enrollment paths and coarse progression metrics.
- Implemented clear, responsive Razor UI templates to optimize layout accessibility boundaries across diverse desktop and mobile viewports.

EDUCATION & ACADEMIC CONTEXT

|                                         |                                        |
|-----------------------------------------|----------------------------------------|
| Bachelor of Science in Computer Science | Kirinyaga University – Kerugoya, Kenya |
| Software Development Certification      | Power Learn Project – Nairobi, Kenya   |

CERTIFICATIONS & TRAINING

- JS AI Build-a-thon | Microsoft Americas Azure Team (July 2025)
- Advanced Git & Agile Engineering Workflows | Peer Review & Branching Methodology Competence
